Blue Ribbon Azaleas

Special care is given to growing Coastal Plains Blue Ribbon Plants. From the time the cuttings are taken until ready for delivery. From the cutting beds the rooted plants are transplanted for the first time to the liner section, during which period of growth the young plants are pruned or pinched to get several branches started close to the ground. The next season finds all the "liners" transplanted for the second time to the growing beds and given more room. This transplanting is followed by additional pruning to produce stocky, well-branched plants that are sure to give satisfaction.

AZALEAS are easily grown if consideration is given to soil requirements. Well drained acid soil, with plenty of humus, which tends to conserve moisture is generally ideal, and locations giving some sun during the day are preferable to deep shade.

From October on through the blooming season is ideal transplanting time, preference being given to planting before coming into bloom. All our Azaleas are finished in open ground under partial shade of pine trees, and can be transplanted at any time throughout the year.

KURUME AZALEAS as a group are much hardier than the Indian varieties. Being smaller-flowered and more compact in growth, they first gained popularity as potted plants, but now are used extensively in landscaping. Colors are rich and varied and blossoms may be single, "hose-in-hose" or double.

KURUME VARIETIES:

AMOENA: Small double, rosy-purple flowers in dense masses; hardy.

APPLE BLOSSOM: Single white, shaded pink to outer edges.

CHRISTMAS CHEER: Deep red, hose-in-hose, compact, hardy, mid-season.

CORAL BELLS: Dainty shell-pink, shading darker to center, profuse bloomer, small, round, glossy foliage, a popular variety.

HEXE: Crimson-red flowers good size, hose-in-hose, compact, mid-season.

HINODEGIRI: Brilliant scarlet, profuse bloomer, rounded green leaves.

LORAIN: Cerise, double. Flowers good size, early to mid-season.

MME. PERICAT: Light pink flower, showy, late.

PINK PEARL: Delicate apple-blossom pink in dense clusters; late.

RAMENTACEA: Single pure white, very free-flowering, strong grower.

SALMON BEAUTY: Flowers large, salmon; compact, showy; excellent for pot plants.

SNOW: Pure white flowers, hose-in-hose, free bloomer, excellent for pot plants.

SWEETHEART SUPREME: Shell pink double, large round glossy foliage. One of the newer varieties; very good.

SIZES OF KURUME VARIETIES TWO OR MORE TIMES TRANSPLANTED AND SHEARED. 4 to 6 in., 6 to 8 in., 8 to 10 in., 10 to 12 in., 12 to 15 in.

INDIAN AZALEAS: Those large-flowered, evergreen, strong-growing plants, the most showy of all in our southern gardens, have in recent years, really come into their own. There is a place in every planting for Azaleas and in any grouping where they predominate, the result is always striking.

INDICA VARIETIES:

ALBA INDICA: Pure white, tall growing, very hardy.

BRILLIANT: Flowers carmine, tall growing, late.

DIXIE: Orange-red, shading to lavender near center, strong growing, early to mid-season.

DUC de ROHAN: Salmon, medium size, free-flowering; compact, medium grower.

ELEGANS: Light pink, fast-growing, early.

FIELDERS WHITE: Pure white, early, hardy. Very good.

FORMOSA: Deep lavender, strong growing, good foliage, one of the most popular varieties.

GEORGE LINDLEY TABER: Orchid with darker markings. Introduced by Glen St. Mary Nurseries. Should be in every garden.

Blue Ribbon Kurumes

Corner of a Propogating House

GEORGE FRANC: Deep pink with dark carmine blotch. Medium growth. Early.

GLORY OF SUNNINGHILL: Orange-scarlet flowers, medium growth with dark green veined leaves. Mid-season.

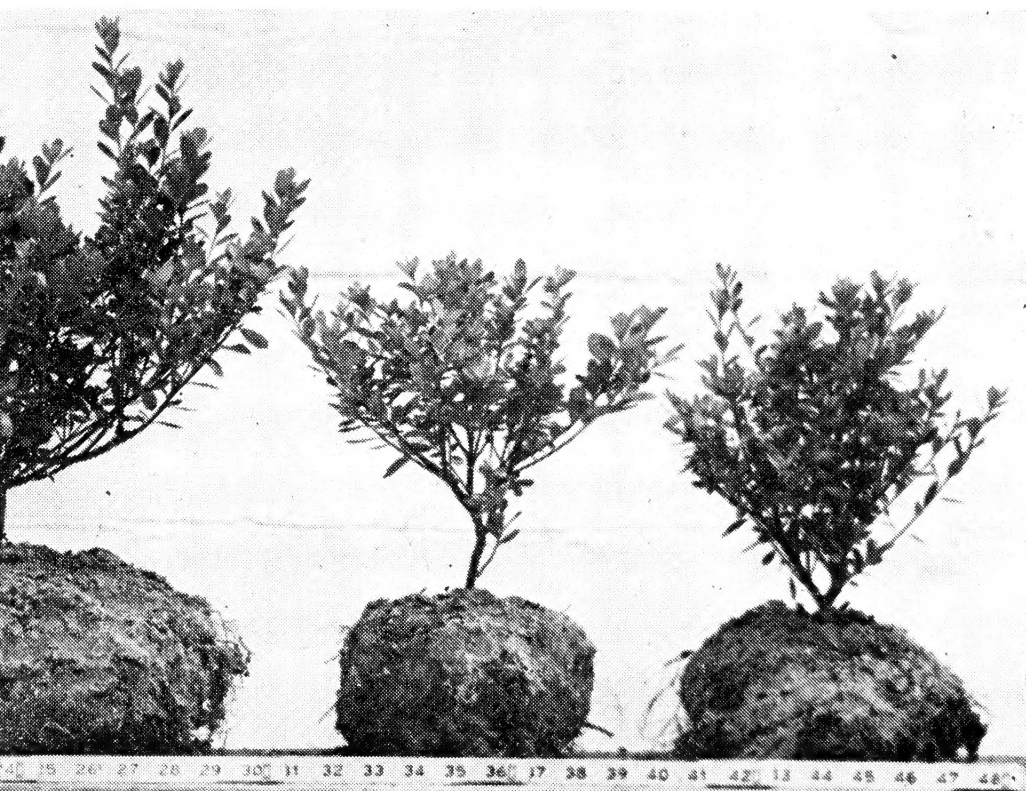

HARRY VEITCH: Clear pink with crinkled petals, slow growing, Late.

LAWSAL: Salmon colored flowers, good upright growth. One of the best.

LIGHT LAVENDER: Delicate lilac, profuse bloomer, late.

OMURASAKI: Rose-lavender, strong growing, compact, hardy. Mid-season.

PRES. CLAY: Orange flowers of medium size, tall, open growth. Medium early.

Variety Coral Bells

PRIDE OF DORKING: Wine-red, very free-flowering, medium growth. Late.

PRIDE OF MOBILE: Beautiful watermelon-pink, fast grower, similar to Elegans but flowers are larger and brighter. Mid-season.

PRINCE OF WALES: Free-flowering red, compact, midseason to late.

PRINCE OF ORANGE: Dark orange-red flowers, compact growing, free flowering, mid-season.

PHOENICEA: Resembles Formosa but petals somewhat narrower.

●
AZALEA MACRANTHA: is sometimes grouped with the Kurumes, however, it should be in a separate class. While the majority of the bloom extends the Azalea-blooming period for sometime, occasional flowers will appear throughout the year.

SINGLE CLEAR PINK, DOUBLE CLEAR PINK, DARK RED.

●
KAEMPFER PINK: Very hardy pink, tall growing, late.

●
In addition to the foregoing list, we have a limited supply of some twenty-five other varieties.

●
SIZES OF INDICA VARIETIES: OPEN GROWN, TWO OR MORE TIMES TRANSPLANTED WELL-BRANCHED.

6 to 8 in., 8 to 10 in., 10 to 12 in., 12 to 15 in., 15 to 18 in., 18 to 24 in., 24 to 30 in.

Blue Ribbon Camellias

In the Camellia section as with the Azaleas, much the same growing practice is used, in order to bring to your garden plants of unusual vigor and quality. Some Camellia fanciers are inclined to overlook the dependable varieties in favor of newer, untried sorts which have yet to be proven desirable under all conditions. Many varieties have been distributed under several different names, which often leads to duplications and disappointments. We have endeavored to use the variety name approved by the American Camellia Society. Avail yourself of up-to-date information by joining the American Camellia Society, address Prof. R. J. Wilmot, Gainesville, Florida for application blanks.

Due to many factors governing the growing and marketing of Camellia plants, including supply and demand, we group our variety list in three sections, Rare or Unusual Group 1; Standard varieties Group 2, and Standard Varieties Group 3, in order to facilitate listing of values. Heavily flowered specimens priced according to value. Special attention is called to varieties marked X, available in quantity to those growers in need of understock.

RED VARIETIES

BEAUTE de NANTES (2) Flower large, carmine, incomplete double.

COL. FIREY (2) Very double, well shaped flower, brilliant crimson, one of the best.

GUNELLII (2) Semi-double, rose-red

GLORIE de NANTES (2) Very large, semi-double, cerise flower, interspersed with stamens.

HENRI FAVRE (3X) Small double red, white stripe to end of petals, especially good understock.

IMPERATOR (2) Brilliant Christmas-red, Peony-type, irregular petals intermixed with golden stamens.

JARVIS RED (2) Large, semi-double deep red, prominent stamens, dark green foliage.

KELLINGTONIA (1) Large peony-type, rich rose-red.

MATHOTIANA (1) Large imbricated as first opens, sometimes showing stamens, large, dark green foliage. Deep red shading to purple.

PROF. C. S. SARGENT (2) Peony-formed crimson, excellent grower. Early.

REINE des FLEURS (2) Flowers medium, high color carmine petals.

SARAH FROST (3X) Imbricated, compact, strong growing, rose-red.

TOM MALONE (3X) Cherry-red, semi-double to double, good grower.

PINK VARIETIES

AUGUSTA WILSON (2) Deep pink, tall, fast growing; early.

ALTHEA FLORA (2) Semi-double deep pink.

CAMEO PINK (2) Incomplete double, self pink, medium size, stamens show when fully open.

CARPENTERII (2) Clear pink, incomplete double.

CLEVIANA (2) Peony-form, solid pink, few stamens, dark green foliage.

CHRISTINE LEE (2) Semi-double flowers about four inches across.

DEBUTANTE (1) Peony-form delicate pink, very desirable.

ENRICO BETTONII (2) Semi-double translucent pink, yellow stamens, rapid grower.

EMPRESS (1) Very large semi-double, beautiful shade of salmon-pink.

HERMOSA (2) Fully imbricated, medium size, clear pink, stocky growth.

LADY HUMES BLUSH (1) Delicate flesh color, very double and symmetrical.

LALLOROOK (1) large fully double incurved petals, rose-pink merging to deeper pink at edge.

PINK PERFECTION (2) Medium size, delicate pink, free blooming, always popular.

WILDERS ROSE (3X) Fully double, rose-pink, good grower.

Camellias Twice Transplanted

Azalea Growing Bed

WHITE VARIETIES

ALBA PLENA (2) Early, full double, pure white, free blooming, considered by many the best white.

CANDIDISSIMA (2) Free flowering, pure white, double, medium size, compact.

FIMBRIATA (1) A form of Alba Plena with edges of petals serrated, scarce.

LILLYI (2) Flower medium, double white occasionally marked with carmine.

NOBILISSIMA (2) Creamy-white interspersed with yellow stamens.

PURITY (2) Imbricated white, vigorous upright open growth.

VARIEGATED VARIETIES

AUGUSTE DELFOSSE (2) Double red, sometimes striped, good grower.

BONOMIANA (2) Large white variegated with deep red, with stamens.

BRETTII (2) Highly variable pink and white, medium sized flowers.

COMPTE de GOMER (2) Double flesh-pink with marking of carmine-rose.

ELEGANS (2) (Chandler) Large, semi-double pink and white, very popular.

ELEANOR FRANCHETTI (2) Large, peony-flowered, white with pink markings.

GOV. MOUTON (1) Large flowering, peony-type, deep red, marbled white.

GIRODONI FRANCHETTI (2) White and pink irregularly striped, good grower.

HERME (2) Pink and white semi-double, blossoms slightly fragrant; a favorite.

HENRI VIII (2) Fully imbricated, carmine-red white flecked.

HORKAN (2) Semi-double white with pink or rose markings.

HONEUR de AMERIQUE (2) Peony-form, large, deep pink often spotted white.

LATIFOLIA (1) Large semi-double, bright red blotched white.

LEGEMEN (2) Highly variable, semi-double, creamy-white and pink, unusual variety.

MADAM de STREKALOFF (2) Semi-double pink and white, sometimes fully double.

MEIGS VARIEGATED (3X) Flowers small to medium, variegated carmine with white splotches.

STILES PERFECTION (2) Peony-form, pink and white.

In addition to the above list, we have a limited number of some eighty rare and unusual varieties; some grafts one and two years old.

CAMELLIA SASANQUA—These small leaved, early flowering Camellias are especially attractive in shrubbery groups and specimen plants, blooming from October to November, they open up the season of Camellia bloom in the South, more rapid growing than Camellia Japonica. We offer two varieties. Single Rose and Double White—Mine-no-Yuki.

SIZES OF CAMELLIAS, OPEN GROWN, TWO OR MORE TIMES TRANSPLANTED: 12 to 15 in., 15 to 18 in., 18 to 24 in., 24 to 30 in., 30 to 36 in. All the above sizes balled and burlapped.
